**Recognition of Innovative Ideas and Efforts Made before
Correctly for Sustainable Technical Progress**

The advantages of electronics technology for computational speed as opposed to
mechanical or electromechanical technology

**Obviously, Electronics has been thousand to million times faster than
Mechanical and electromechanical technology.**

Sometimes, we could not correctly realize
the ongoing innovative ideas of that era.

ABC Machine <-> ENIAC

Stored Memory Computer: EDVAC <-> von Neumann type Computer

**We should not hesitate to recognize the previously made
innovative ideas and efforts when we know.**
